Job

- [ ] unknown
- [ ] unemployed
- [ ] technician
- [ ] student

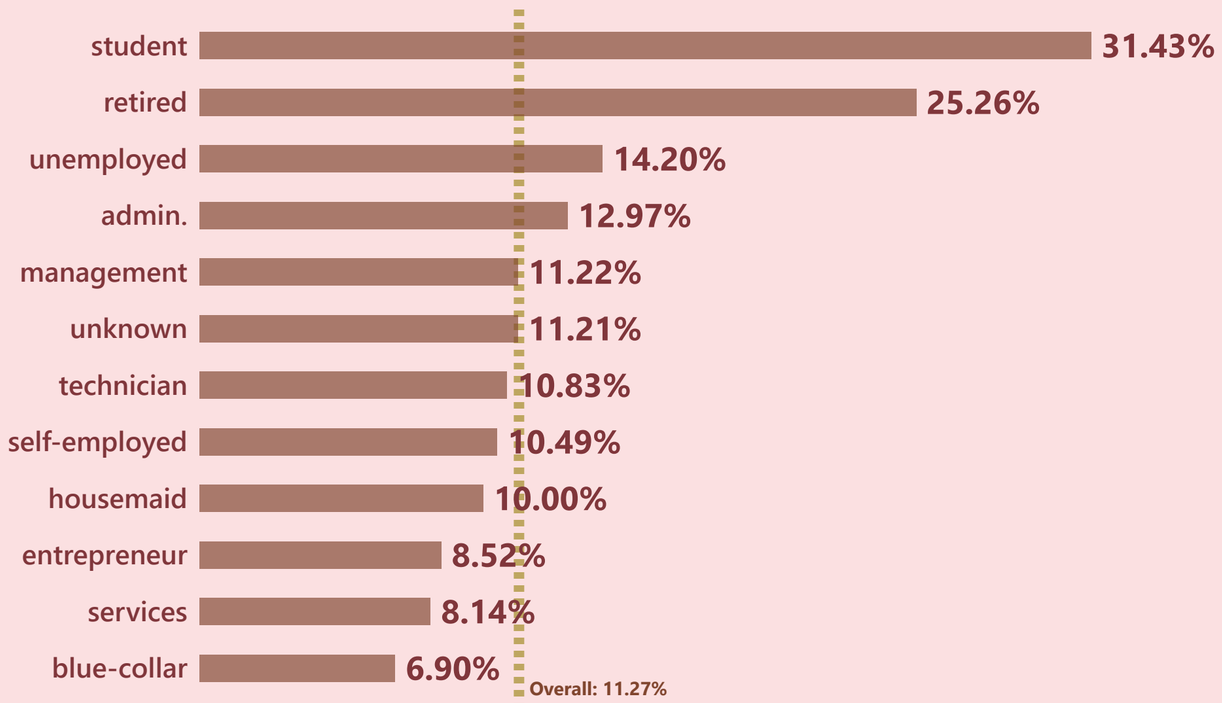

Contact

- cellular
- telephone

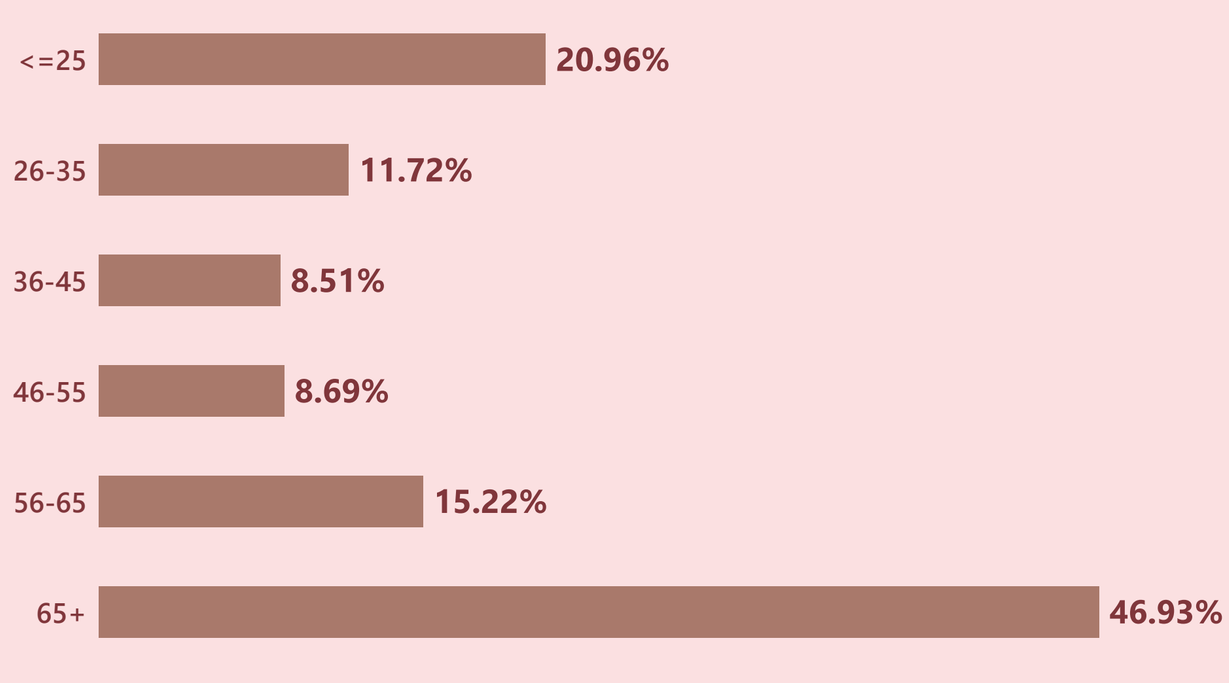

KPI CARDS

Avg age	AVG Post Call Metric	AVG Call Length(subs)	AVG Call Lenght(non_s...	AVG contacts per record	conversion rate	Total Calls	Subscribers
40.02	4.31	9.22	3.68	2.57	11.27%	41K	5K

Students and retired customers convert at 2-3x the average

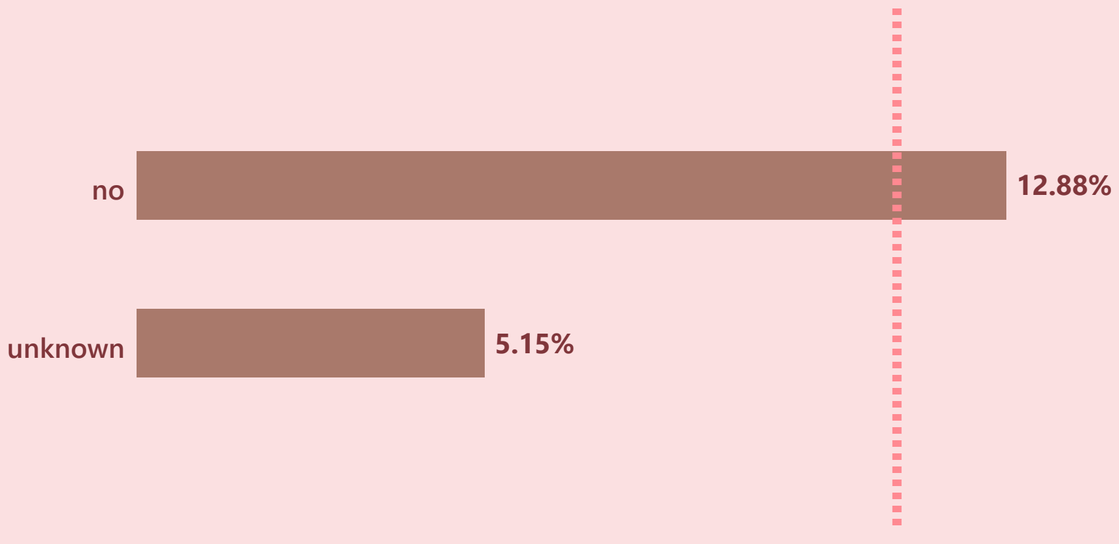

Youngest and oldest customers convert most (U shape)

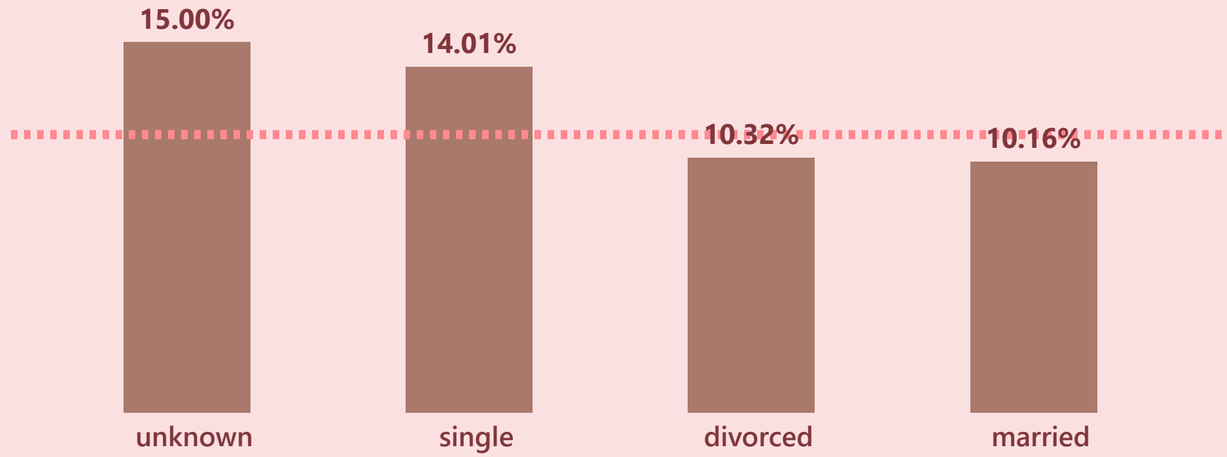

'yes' excluded (about 3 customers)" and "'illiterate' excluded (18 customers)

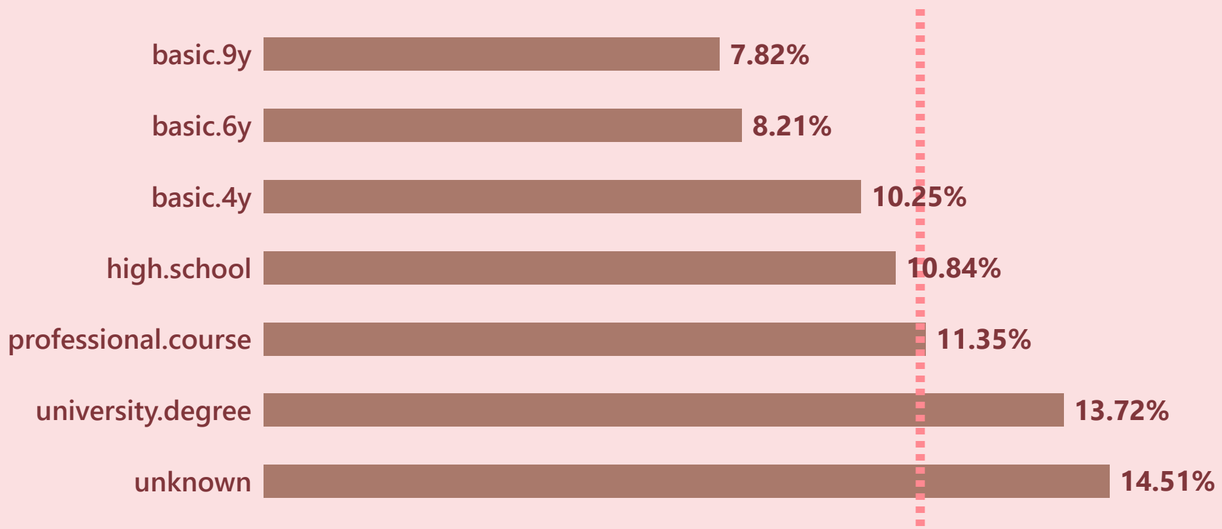

Unknown default status converts at less than half the rate

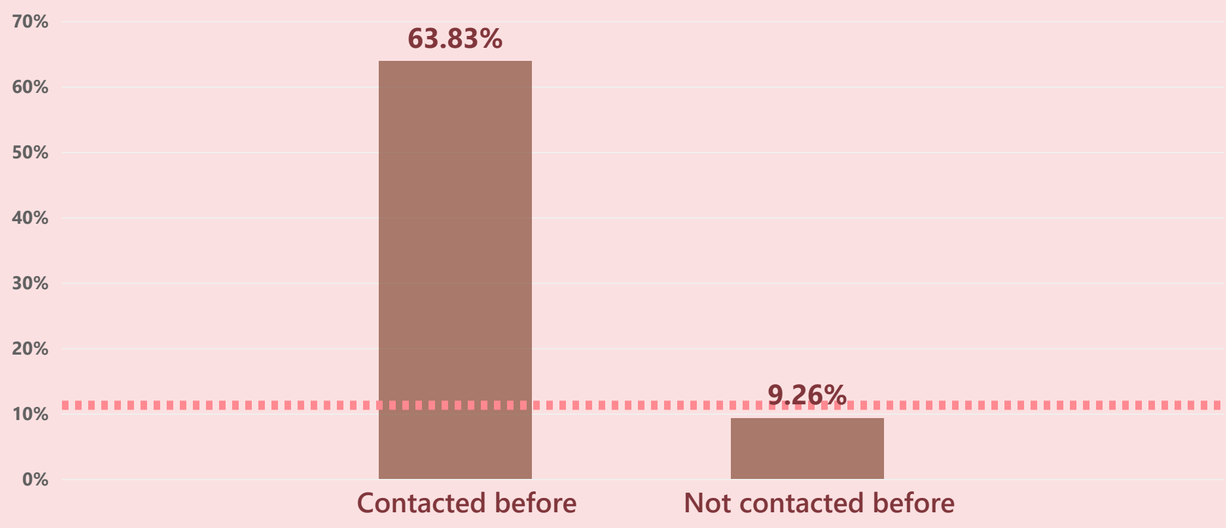

Single customers convert slightly more than married or divorced

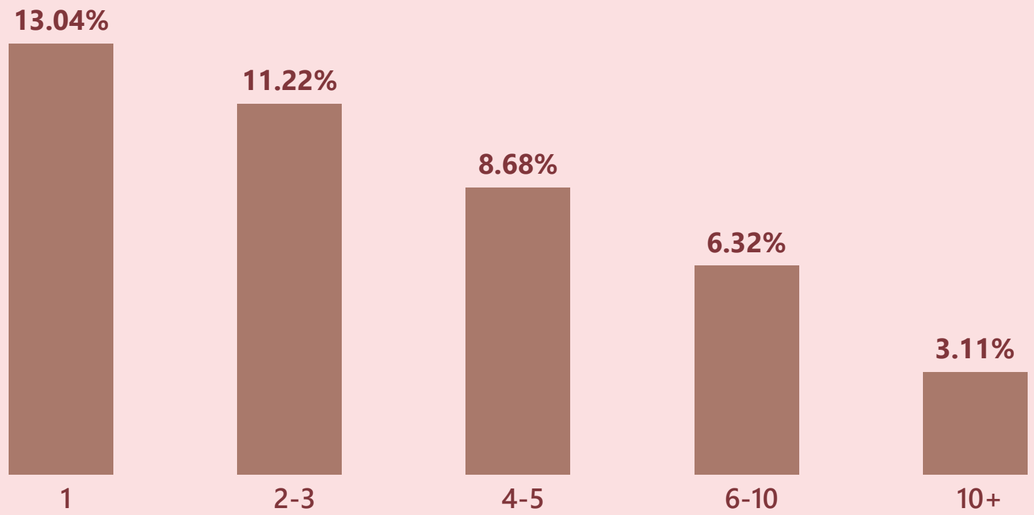

Conversion rises with education level

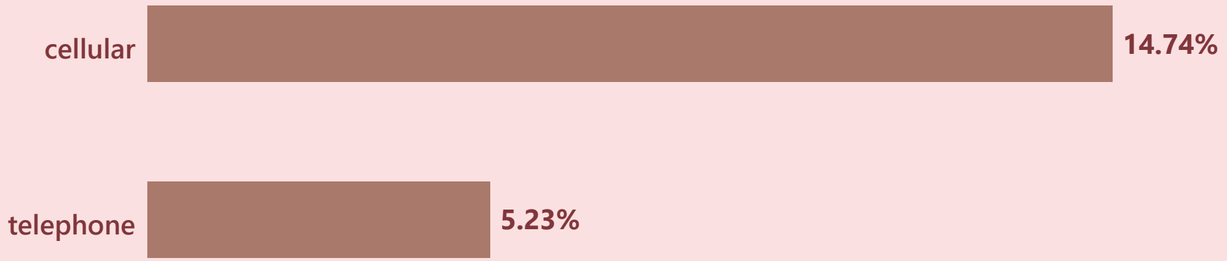

Customers contacted before convert at ~7x the rate

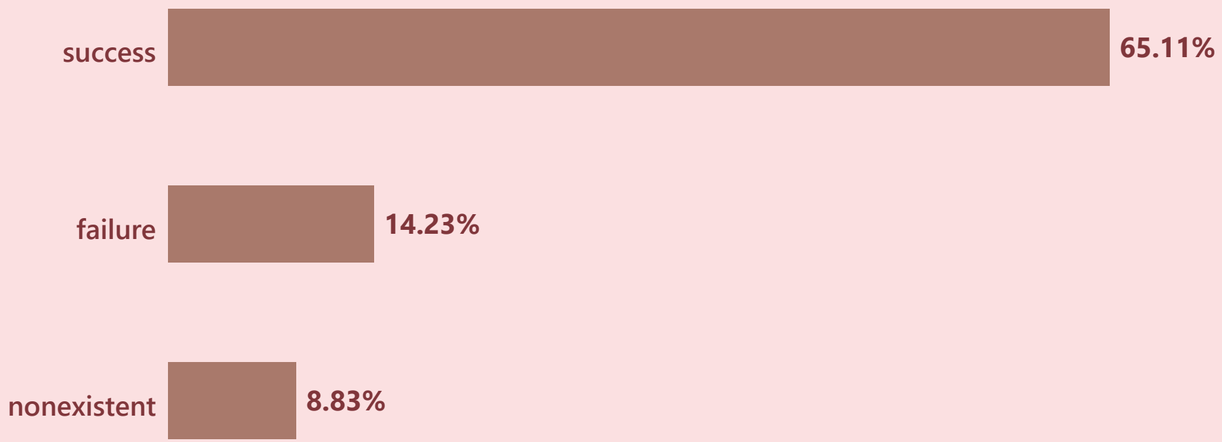

The more calls, The lower conversion

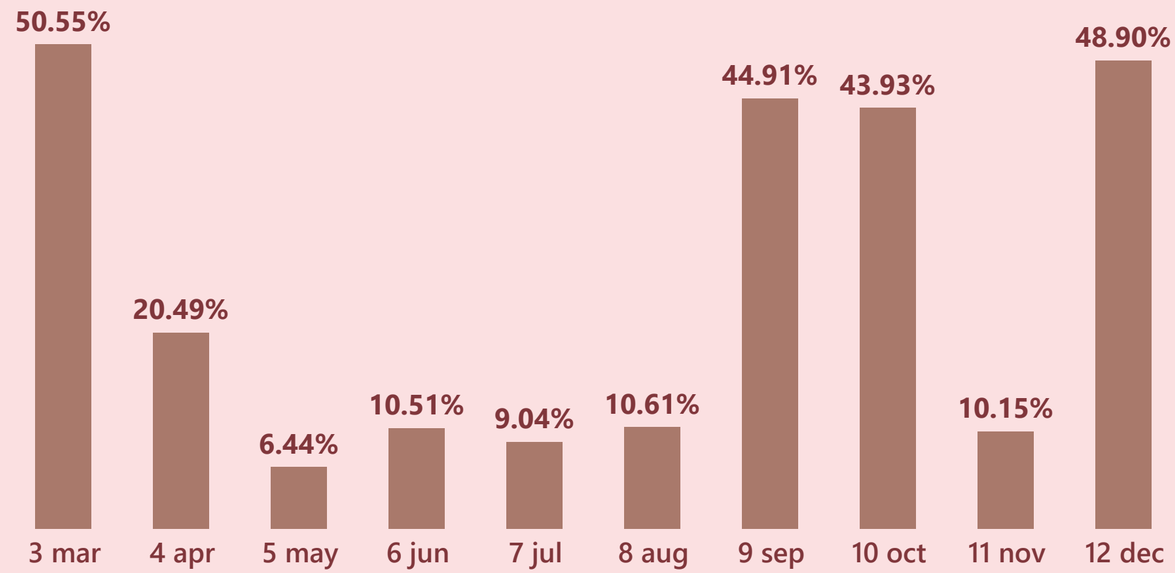

Cellular calls are far better than telephone calls

Past successes convert at 65%

Mar, Sep, Oct and Dec convert best, but had far fewer calls

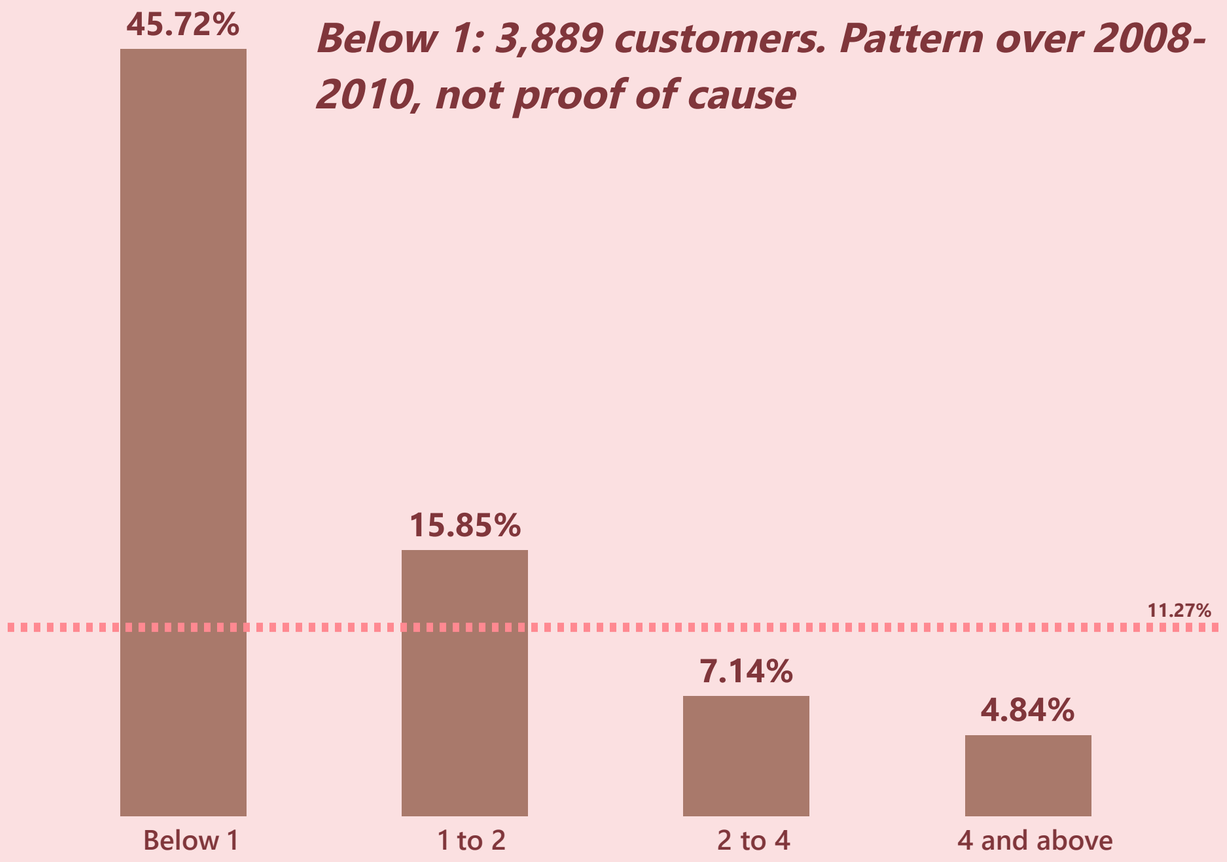

Economic conditions: subscribers vs non-subscribers

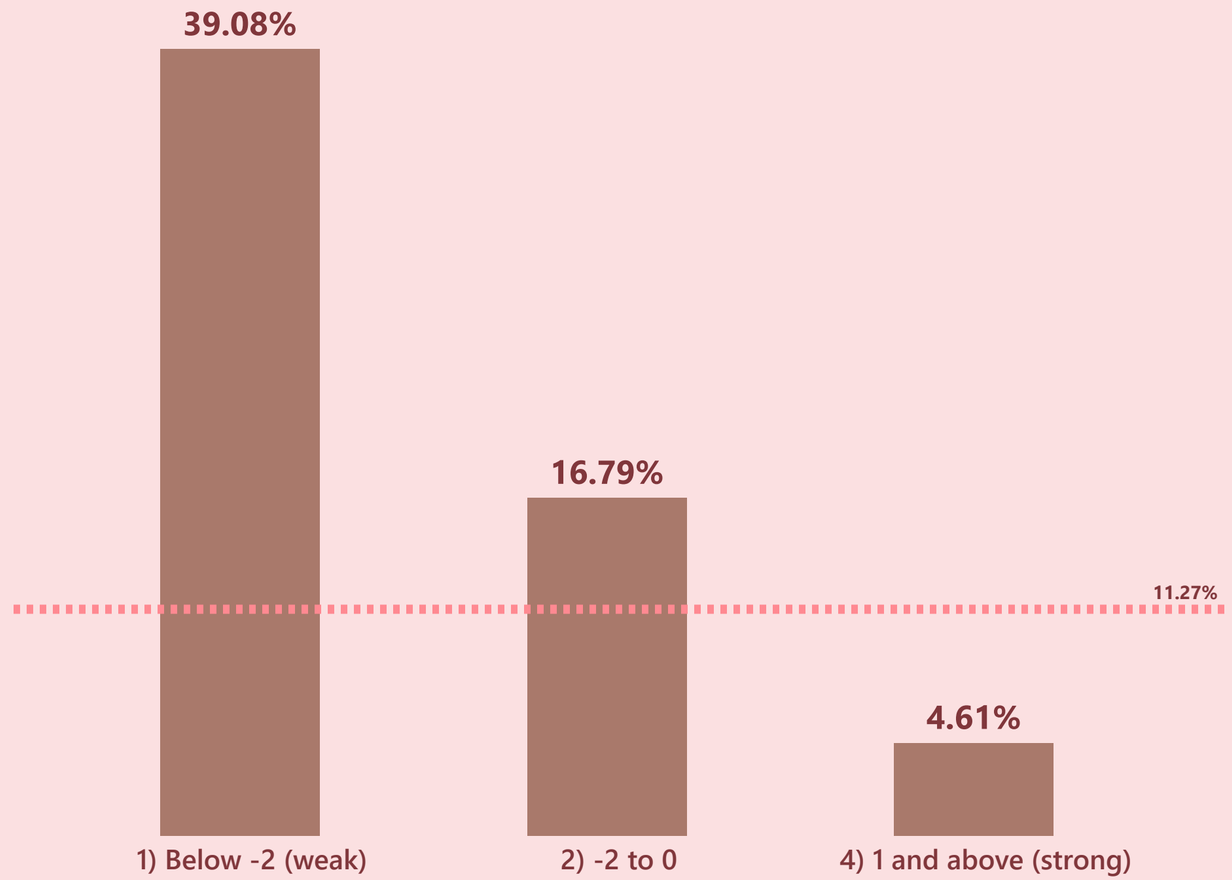

Subscribed Label	Average of emp_var_rate	Average of cons_price_idx	Average of cons_conf_idx	Average of euribor3m	Average of nr_employed
Did not subscribe	0.25	93.60	-40.59	3.81	5176
Subscribed	-1.23	93.35	-39.79	2.12	5095
Total	0.08	93.58	-40.50	3.62	5167

conversion was higher in the low-rate period

Below 1: 3,889 customers. Pattern over 2008-2010, not proof of cause

Conversion was higher when the job market was weak

KPI CARDS

Overall Rate	Total Calls	Subscribers
11.27%	41K	5K

KEY FINDINGS:

Findings	Evidence
Past successes convert best	65% for poutcome = success
Students, retired and 65+ convert most	31%, 25%, 47%
Cellular beats telephone	14.7% vs 5.2%
More calls, lower conversion	13% after 1 call, 3% after 10+
Unknown default status converts at less than half the rate	5.2% vs 12.9%

Recommendations:

- Prioritise customers who said yes before, then students, retired and 65+.
- Use cellular rather than landline.
- Stop after 2 to 3 calls per customer; returns drop sharply.
